ORMISCO
USER MANUAL

A place for everything.

Lagartobi Studio

A practical guide using a real example: a cordless drill and its two batteries.

You don’t have to remember where you put your things. ORMISCO remembers for you.

1. What is ORMISCO

ORMISCO helps you keep track of your items and remember where they are. You can create locations, save photos and notes, search for what you need and back up your data. You don't need to create an account.

This manual follows a real example: storing a drill in Trastero (storage room) → Armario metálico (metal cabinet) → Segundo cajón (second drawer). We will then find it using the search function and see how to view its location.

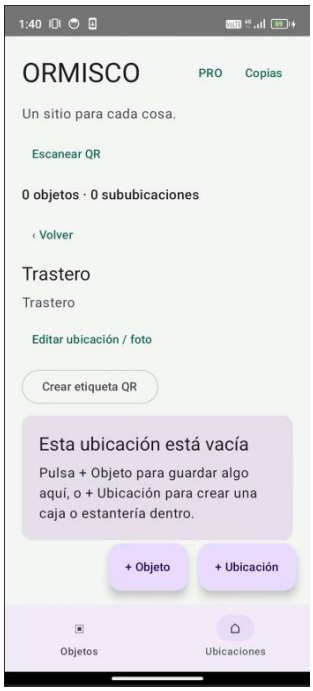

The difference between an item and a location

A location is a place where you store things: a storage room, cabinet, shelf, box or drawer. An item is something you keep there, such as the drill.

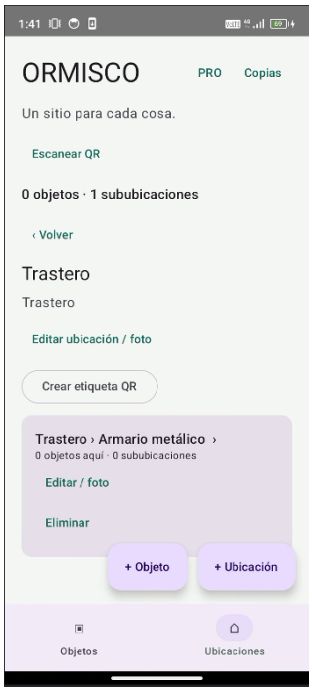

2. Create your location structure

Open the "Locations" (Ubicaciones) tab. Tap "+ Location" (+ Ubicación) to create Trastero. Open it and tap "+ Location" to add Armario metálico. Finally, open Armario metálico and create Segundo cajón.

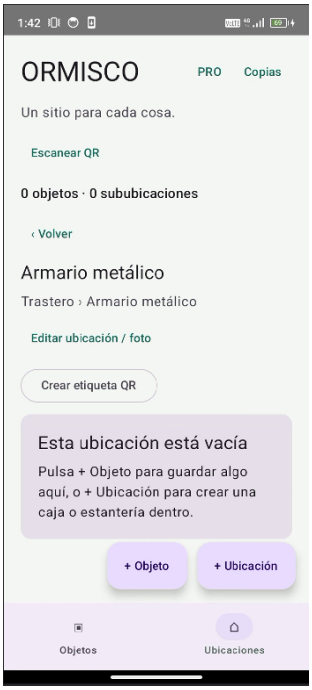

The screenshots show the structure taking shape step by step: first an empty Trastero, then the locations inside it.

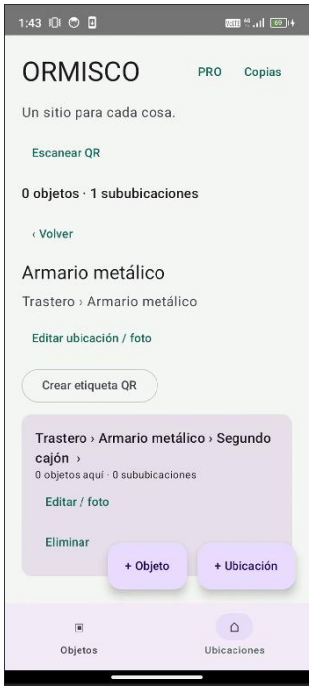

Trastero, newly created and still empty.

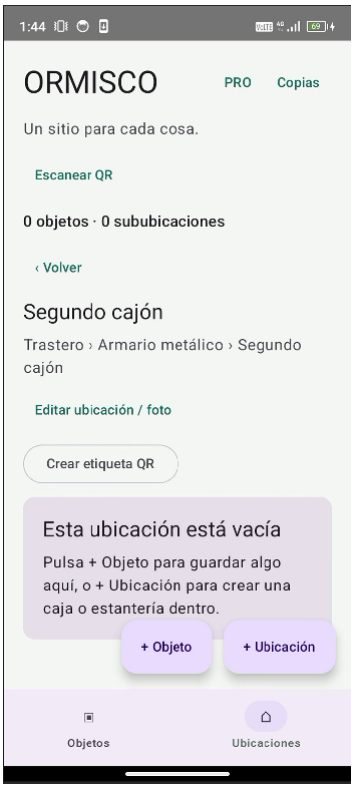

Trastero with Armario metálico inside.

Inside Armario metálico.

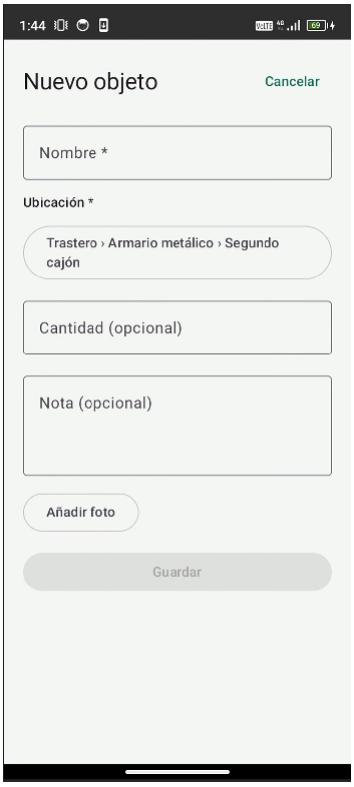

Armario metálico with Segundo cajón.

Segundo cajón: the full path before adding the drill.

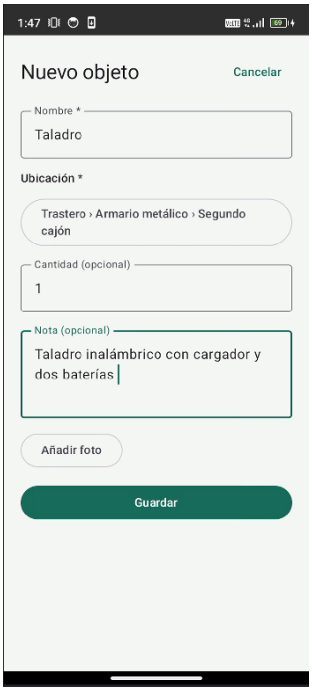

3. Add the drill

Inside Segundo cajón, tap “+ Item” (+ Objeto) to open “New item” (Nuevo objeto). Choose a memorable name, confirm the location and add details that will help you identify it.

The “New item” form with the location already selected.

In our example, we enter “Taladro” (drill), a quantity of 1 and the note “Taladro inalámbrico con cargador y dos baterías” (cordless drill with charger and two batteries). We then add a photo of the drill and its batteries.

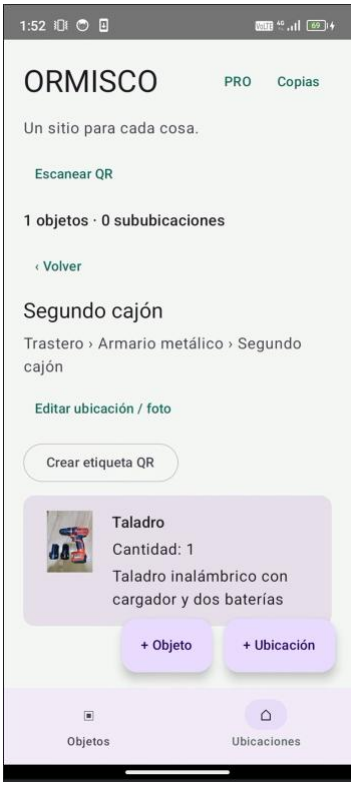

Name, quantity and note entered.

The completed form with a photo of the drill.

Tap “Save” (Guardar). The item will appear inside Segundo cajón, along with its photo, quantity and note.

Segundo cajón now contains the drill you added.

4. Find an item when you need it

Imagine several months have passed and you can't remember where you put the drill. In the "Items" (Objetos) tab, type "taladro" in "Search items, notes or locations" (Buscar objetos, notas o ubicaciones). ORMISCO displays the result and its full path.

Search for "Taladro": Trastero → Armario metálico → Segundo cajón.

You can also search for a word in a note or the name of a location. Searches are not case-sensitive.

5. View and edit the drill

Tap the item to edit it. You can correct its name, change its location, adjust the quantity, edit the note or replace the photo. If you move the drill, update its location in ORMISCO too.

The “Edit item” screen: details and location.

Photo, Save and Delete item.

6. View and reorganise locations

When you open a location, ORMISCO shows its name, full path, sublocations and the items it contains. “Edit location / photo” (Editar ubicación / foto) lets you change its name, photo or parent location. You cannot move a location into itself or any of its sublocations.

If you reorganise the storage room, you can update where each drawer is without adding the items again. Always check the path before saving.

7. QR labels (ORMISCO PRO)

Open “Segundo cajón” and tap “Create QR label” (Crear etiqueta QR). The label shows the location’s name and path. You can save or share the image, print it and attach it to the drawer.

Then tap “Scan QR” (Escanear QR) and point the camera at the label. ORMISCO opens that location directly, where you can see the drill stored there.

The QR code contains a random location identifier, not your inventory or photos. Renaming or moving the location does not invalidate its identifier.

Screenshot note: this edition does not include an image of the QR label for the drill’s location because the original file is not yet available. It has not been replaced with a label for another location.

8. Backups

Tap “Backups” (Copias) at the top. “Save backup” (Guardar copia) creates a file containing your locations, items and photos. You can keep it on your phone, copy it to a computer or save it to a USB drive.

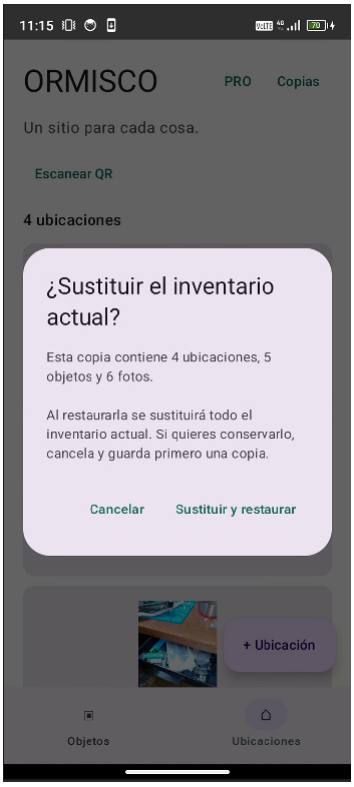

Options for saving or restoring a backup.

In our example, the backup preserves the storage room structure, the drill’s details, its note and photo, and the location identifiers.

Restore a backup

Tap “Restore backup” (Restaurar copia), select the file and read the warning. Restoring a backup REPLACES your current inventory; it does not automatically merge the two inventories. To keep your current data, save a backup first.

Confirmation before replacing the current inventory.

9. ORMISCO FREE and PRO

FREE supports up to 50 items and includes locations, sublocations, photos, search, editing and backups. PRO unlocks unlimited items and the ability to create and scan QR labels with a one-time purchase and no subscription.

If you return to FREE from PRO with more than 50 items, your existing items are not deleted. You cannot add more until you are within the limit or regain PRO access. Restoring a backup with more than 50 items requires PRO.

10. Example recap

1. Create Trastero, then Armario metálico and Segundo cajón inside it.
2. Put the drill in Segundo cajón.
3. Add it to ORMISCO with a quantity, note and photo.
4. When you need it, search for “taladro”: ORMISCO shows the exact path.
5. Optionally, attach a QR label to the drawer and scan it to open that location.
6. Save a backup to protect your data.

11. Useful tips

- Use clear, recognisable names.
- Add photos to items that are difficult to tell apart.
- Use notes to describe accessories and other details.
- Update ORMISCO whenever you move an item.
- Back up regularly and keep at least one copy somewhere other than your phone.
